

# BAP Technology Consultants Ltd

## A MULTISENSORY DELIGHT

In the ten years since its founding, BAP has outgrown its small Hong Kong headquarters and expanded into Shenzhen, Guangzhou and Macau. From this, BAP is clearly a success, but, until now, the firm has been somewhat off-the-radar. What is BAP, then? The company is best known among architectural and interior design circles as a 'total solutions' provider of seamlessly integrated lighting control and professional audiovisual systems for corporate, hospitality, educational and governmental settings. BAP is uniquely involved at every stage of a project, offering services that include drawing up budget proposals, conducting site visits, designing and installing systems, and carrying out operational training and maintenance. Not many, if any, of its competitors offer such comprehensive solutions – what BAP calls Solution House @ Lighting \* Control \* Pro AV. Because of its wide-ranging support

Venetian Macao Resort Hotel

services, clients – many of them high profile – keep on coming back. The firm, of course, also keeps clients enthusiastic with its high quality technical services. This is realised in no small part by BAP's crew of overseas-trained engineers and technicians, some with over 15 years experience in the field.

The company is also Hong Kong's largest distributor of Lutron dimming systems. Thanks to BAP, Lutron's state-of-the-art products can be found lighting up major establishments including the Crown Macau Hotel and the Venetian Macao Resort Hotel. The Lutron Homeworks series controls illumination levels and the ambience throughout the Crown, including the casino, spa, restaurants, hallways and lobbies; while the Venetian Macao is equipped with the Grafik Eye 7000 Series – an ideal lighting control system for large venues – plus LP and DP Dimming Panels. These systems not only enable operators to easily control and automate their lighting and audiovisual systems of an entire venue, but they help users significantly reduce energy consumption – a concern for us all.

BAP also rules the roost in the audiovisual department as a leading dealer in Extron AV control systems and the firm responsible for installing the largest AV control system in the city's education sector. BAP installed over 150 MediaLink Control systems throughout the campus of Hong Kong Community College, forming the most up-to-date asset control management system that remotely monitors and controls all AV devices in the college. The benefits of this system include immediate technical support for operators, efficient maintenance of AV devices and increased security of AV devices.
