

BAP integrates Christian Dior's new training Centre at TaiKoo Place

Solutions ensure objectives of energy-saving and ease of operation are met

A 40" Samsung full HD display is installed at the reception area

The JVC indoor dome colour camera

Christian Dior is one of the world's top fashion houses which provides good quality products as well as top-end customer service. To maintain their significant market share in Hong Kong, Christian Dior opened a new training centre to ensure that its staff were well equipped to provide the high standards expected of them. The new training centre in Hong Kong is located at the eastern end of the TaiKoo Place complex.

BAP's past projects with Christian Dior in Guangzhou and Nanjing, China, provided a fruitful experience and understanding of system functional needs and requirements of the customer. The primary design objectives for this project was to achieve energy-saving and ease of operation.

Colour Touch Panel Control
BAP integrated a **Extron TLP 710TV**, high-end colour touchpanel control, to simplify operations for all the equipment. The touchpanel was designed to control the LCD projector, the motorized projection screen, video playback, sound system and the lighting control. The touchpanel control allows full-motion video display for preview and monitoring using Extron's twisted pair technology. Its built-in speaker provides audio for the full-motion video preview and audible feedback from button presses. This touchpanel fulfilled the user's technical, operational and budgetary needs. In addition its contemporary design complemented the aesthetics of the environment.

Light Dimming Control
Lutron Grafik Eye QS preset lighting control system was integrated to control lights in the training room and to display different scene modes with the touch of a button. The system is able to recall different scene settings, such as presentation, meeting and training mode etc. Furthermore, the dimming feature of the system enables significant energy saving by consuming less electricity yet producing comfortable light level.

Sound System
The sound system in the training centre included **Extron DMP64** digital matrix

processor, **MVC 121** Plus stereo mixer, **XPA 2001** power amplifier and **SI 26CT** two-way ceiling speakers.

Display System
A **40" Samsung full HD display** is installed at the reception area to continuously playback the most updated fashion and/or company story of Christian Dior.

Closed-circuit television system (CCTV)
CCTV cameras were installed in the role playing section. The JVC indoor dome colour cameras that were installed have 27x optical zoom for high-definition quality video. One of its special features: day and night recording function works well with the energy-saving light dimming control by Lutron. The camera is able to record highly clear video in the dark, even after the Lutron light saving mode has turned on the lights after office hours.

BAP was able to achieve the objectives of the customer as well as ensure that the training centre was on par with current technology trends.
